

Know the condition of your whole structures portfolio, and drill into any structure in seconds.

spanSense is asset management software for the bridges, culverts, footbridges, retaining walls, and sign gantries a local authority is responsible for — one network view and one condition score, in place of disconnected spreadsheets and standalone records.

1 network view

every structure you own, on one live map

0–100 BCI

condition scored consistently, portfolio-wide

Defect-level

severity, priority & cost tracked per defect

PORTFOLIO OVERVIEW

A single, current view of condition across the network

– Whole network, one map

Every structure colour-coded by condition — bridges, culverts, footbridges, retaining walls, sign gantries.

– Portfolio-wide BCI

Every inspection rolled into one score, ready for committee reporting without re-deriving it from individual files.

– Digital twin per structure

Defects and inspection history viewed in 3D context, in place of a flat list.

ASSET MANAGEMENT, NOT JUST AN INSPECTION LOG

spanSense is built around managing a structures portfolio — condition, defects, and cost together — not just recording what an inspector found on site. It is the layer connecting inspection data to the decisions a structures asset manager is responsible for.

BUILT FOR LOCAL AUTHORITY STRUCTURES TEAMS

- Whole highway network — bridges, culverts, footbridges, retaining walls, sign gantries
- 3D digital twin for every structure, not just a record
- GI/PI statutory inspection compliance, tracked automatically
- Replaces disconnected spreadsheets and standalone records
