

spanSense shows the condition of an entire asset stock, from portfolio level down to any individual structure.

spanSense is asset management software for the bridges, culverts, footbridges, retaining walls, and sign gantries a structures asset owner is responsible for. One consolidated view of asset stock and one condition score, in place of disconnected spreadsheets and standalone records.

Whole asset stock

every structure in the portfolio, on one live map

Works offline

field app captures inspections with no signal, syncs automatically

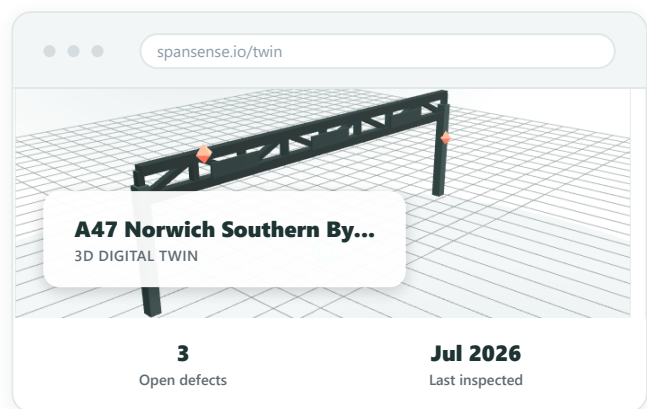

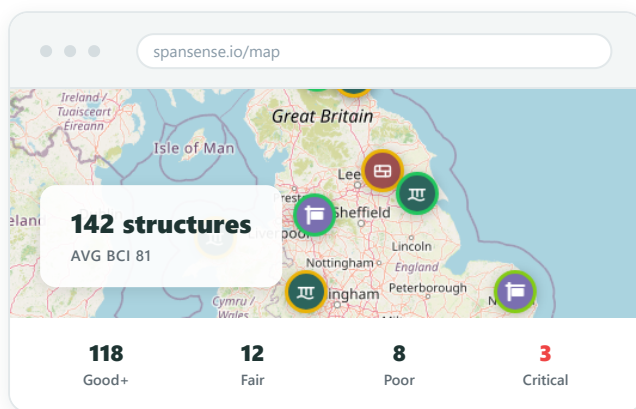

Automated reports

BCI Proforma reports generated from data already captured

PORTFOLIO OVERVIEW

A single, current view of condition across an entire asset stock

– Whole asset stock, one map

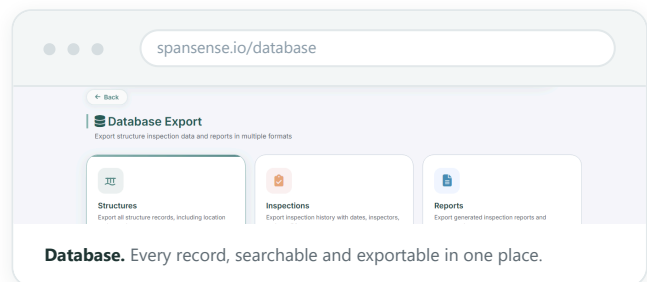

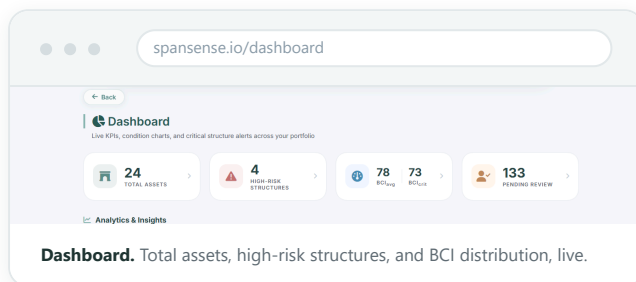

Every structure type colour-coded by condition on one live map, not just bridges.

– Structured, exportable data

Every structure and inspection record held in one consistent format, searchable and exportable on demand, instead of scattered across spreadsheets and PDFs.

– Digital twin per structure

Defects and inspection history viewed in 3D context, in place of a flat list.

THE LAYER BETWEEN CONDITION AND DECISIONS

spanSense brings condition, defects, and cost together into one structures portfolio, giving asset managers the full picture needed to prioritise investment and plan renewals with confidence.

BUILT FOR STRUCTURES ASSET OWNERS

- Inspections scheduled, scored, and reported in line with CS 450
- Offline field capture, synced automatically back to the office
- Two-factor authentication and role-based team access
- Replaces disconnected spreadsheets and standalone records
- Every structure type, not just bridges
- Cloud-hosted, with data encrypted in transit and at rest
